

Nordvestgaard I/S - 900 sows including finishers

FIBERCOMBI
ANIMAL HEALTH AND WELFARE

FiberCombi has all the good qualities of various products gathered as one.

FiberCombi helps to keep the piglets dry, and this way reduces the occurrence of diarrhoea.

Just by reducing the pressure of infection, we can remedy the diarrhoea without the use of antibiotics.

With FiberCombi's improvement of hygiene, we can remedy diarrhoea without the use of antibiotics

Nordvestgaard I/S is a farm with 900 sows including finishers. We have an antibiotic free production, better known as OUA pigs. They are raised without antibiotics.

We started to use FiberCombi in January 2015. The product was recommended to us by an experience exchange group. Since then we have been very glad that we started to use it.

Our experiences with FiberCombi

FiberCombi has all the good qualities of various products gathered as one. That is the reason why I think it works so well. And it is really easy to work with.

Application

We use FiberCombi in the farrowing section, where we apply a handful in the piglets lying area. After farrowing we give FiberCombi to all litters of piglets. A small handful in the lying area during the first week.

If a litter of piglets has diarrhoea they get some extra FiberCombi.

It helps to keep them dry, and this way reduces the occurrence of diarrhoea.

So just by reducing the pressure of infection, we can remedy the diarrhoea without the use of antibiotics.

Customer service

And there is only praise for the customer service that is always taking care of a continuous delivery and always follows up on the coming orders, so we not suddenly are in a situation where we run out of FiberCombi.

Regards
Tina
