

FIBERCOMBI

ANIMAL HEALTH AND WELFARE

I like it especially that I only need to use this one product, as FiberCombi replaces the 3-4 products I used at the same time before.

If there is a wet area we apply FiberCombi and the next day the area is completely dry again.

Simpler with FiberCombi from Destek ApS

We use FiberCombi from Destek ApS in our farrowing section and have done so since January 2015.

Our experiences with FiberCombi

When we started with FiberCombi, we were surprised how easy it is to work with. Of course, it is dusty – like all other products in the same category, but we just apply it before we go to our break, and when we come back it has subsided and can start to act. FiberCombi draws well and dries out well, which I perceive and can see is good for the piglets. If there is a wet area we apply FiberCombi and the next day the area is completely dry again.

I like it especially that I only need to use this one product, as FiberCombi replaces the 3-4 products I used at the same time before.

This has also the extra advantage that I now have reduced my working procedures, and it is easier to explain to the employees how to use it, because FiberCombi is a simple product to work with.

Application

We apply FiberCombi just before farrowing where we spread a large handful (according to 3-4 dl) in every lying area of the piglets. After that I use it almost every day during the first 14 days after farrowing. If I can see, that there are more moist areas, I just spread a little extra FiberCombi, so the area becomes dry. After that I use it as much as necessary.

Customer service

At Destek they are really nice to talk to. They are good at informing and guiding us and at following up and adjusting the coming deliveries, so I don't end up with a huge stock.

Regards
Saxildgård
