

Basic Hygiene Powder

Basic works very well and we hardly ever see any mastitis after calving.

Basic reduces the number of flies substantially and we minimize the occurrence of calf diarrhoea.

Basic keeps the cubicles dry and maintains a good hygiene

We have been using Basic Hygiene Powder from Destek ApS since 2013.

Every time the cows, regarding the milking process, are placed in a holding area, we scrape the moist material down from the cubicles, spread some chopped straw and apply one handful of Basic per two cubicles. So, we get it done twice a day. It keeps the cubicles dry and maintains a good hygiene, so the cell counts are kept down.

Cows, soon calving, and dry cows are staying on a thick layer of straw. We muck out once a week and spread a layer of Basic on the concrete before we apply fresh straw. It works very well and we hardly ever see any mastitis after calving.

We apply one handful of Basic for all calves in the single calf boxes twice a week. It reduces the number of flies substantially and we minimize the occurrence of diarrhoea.

We find Basic easy to work with.
